

Installation, Licensing, and Updates

Announcing AirGon LLC, our new small UAS Company!

AirGon

Lewis Graham

March 2014

Revision 1.0

As discussed in our February issue of GeoCue Group News, we have launched a new subsidiary company. This company is "AirGon, LLC." We have not yet finalized the logo or type styling but the LLC is officially formed!

AirGon will focus on the small Unmanned Aerial Systems (sUAS) business, particularly from a metric point of view. We offer software and training for deriving point clouds and ortho mosaics from sUAS imagery. We currently offer solutions from SimActive, Pix4D and Agisoft.

We will soon be announcing webinars and workshops aimed specifically at obtaining mapping and survey data from sUAS platforms.
