Revision 1.1

Viewing uploaded images on the Reckon website is a great way view orthomosaics and hillshades. If a user needs to download an image to view it offline or in a different program (LP360), this can be accomplished by downloading the image from the web-client. Downloading image layers in Reckon is an easy and secure process that allows the administrator to easily disseminate orthomosaic and hillshade images to designated users. This document provides a quick guide on how to use this feature.

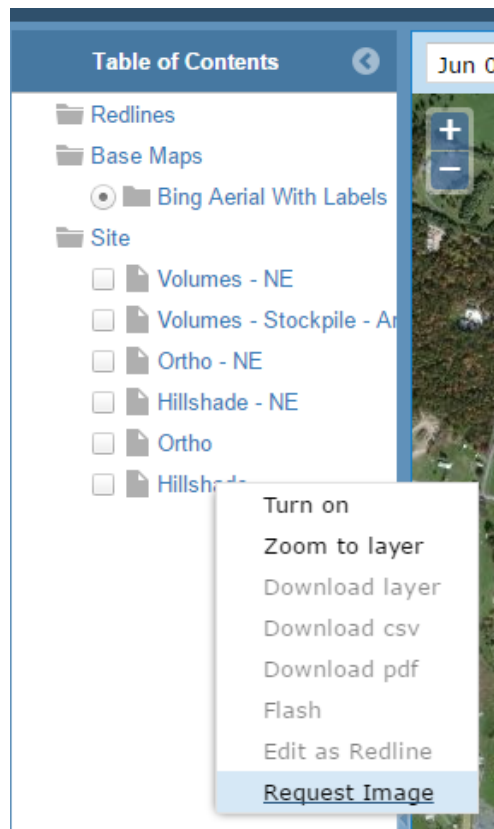

- Step 1 - User requests an image.
 - In the Table of Contents, left click on desired image layer.

- Left click on “Request Image”. In the background, the image files are combined into a single encrypted zip file.

Downloading Image Layers

- Step 2 - The user is sent an email with a link to the download and the password for the zip file.
 - Left click on “download the image”. The image file will now appear in the computer downloads folder.

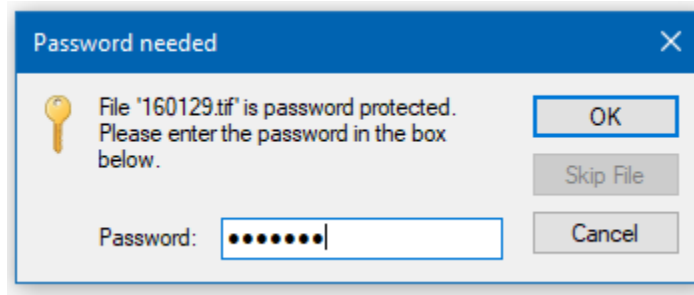

Company Name

Please click on this link to [download the image](#) that you requested.
The image is downloaded as an encrypted zip file using the password: cx2cx1G
Note: The download will be removed after a week.

- Step 3 – Unzip file.
 - When attempting to unzip, or move files, a dialog will appear requiring a password which was given in the email. Enter the password and the files will be unlocked.
